WORK EXPERIENCE

KEED GHANA

2024/03/01 present

RESPONSIBILITIES

- a. Automated the process flow that summarizes the records for all online games under the jurisdiction of KGL Groups. The summary entails all active players and the amount they spend on each of the various online betting games. This helps product managers monitor the performance on the games and device insights on how to grow their products, improve user experience and create variances to keep players active.
- b. Performed an end to end analysis on the collections and disbursements on wallet basis to ensure that the amount reported reflected the exact amount of money that leaves the bank to the deserved recipients. This helped fish out certain fraudulent activities that was happening in gameplay and disbursements respectively.
- c. Manage all collections and disbursements reports for each game. This contains a breakdown of the revenue the business makes on daily basis and how much money the business disburses to their winners.
- d. Performs collections and disbursements reconciliations to ensure that the money that is being disbursed on daily basis reflects the actuals and points out all loop holes and what not.
- e. Effectively manages server performance and sql profiling to ensure all resources are in good shape for seamless reporting.
- f. Used UiPath Studio to build automations to reduce the work force required to perform certain repetitive tasks and reduce the risk of human errors.
- g. Developed a locally hosted website that helps project managers track the performance of outsourced promoters during campaigns to boost customer base growth and ensure clear visibility on each employee's performance.
- h. Developed a birthday program that reads the birthdates of all employees and sends them an email with well wishes and art works accordingly when the date is due.

AIRTELTIGO GHANA

2021/11/15

RESPONSIBILITIES

- Created end-to-end automated reports for daily Product Performance updates using a connection between SQL Server and excel which made access to reports by the product team easy using the proper application of the ETL processes and SQL Queries.
- Created an SSRS dashboard to track performance on epin transfers after scratch cards were taken out of the system to prevent revenue degradation.
- Pilots all reporting on the ongoing bioreregistration process Generates reports to keep track of the performance of agents and promoters and to aid the sales team in paying out commissions for reregistration.
- Ensures daily availability of reports to be used by other teams for effective decision making and analysis.

ACHIEVEMENTS

- Programmed a fully automated python script that scrapes revenue from a site and inserts into an SQL table for day-to-day tracking of A2P revenue.
- Created end-to-end automated reports for daily Product Performance updates using a connection between SQL Server and excel which made access to reports by the product team easy using the proper application of the ETL processes and SQL Queries.
- Built a PowerShell script to automatically copy bulk records and insert them into a dump location to enable easy access to prize winners during “Togumeso” part 2 promotion.
- Optimized a structured query language to provide reports for cross territory serials to enable the sales team to decipher which agents sold outside their territories and meter out needed penalties.

PIZZAMAN

2022/05/10

RESPONSIBILITIES

- Manages and visualizes regional and branch-based sales and revenue reports for tracking business performance with respect to sales per day and its corresponding revenues generated using Power Bi and Dax queries.
